## DETAILED ACTION

### *Response to Amendment*

1. The amendment presented in communication filed June 17, 2004 is acknowledged. It is noted that in the amendment to the claims all of the claims have an identifier of "original" therefore it has been taken that no amendments have been made to the claims.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-72 are rejected under 35 U.S.C. 102(e) as being anticipated by Desai et al.  
(6,412,705)

Desai et al. shows a hydraulically actuated fuel injector 40 having an injector control valve 50, and injector intensifier assembly 80 and a flow controller 67, annular flow passage 66, pressure relief valve 73, drain passage 57 and biasing spring.

As to the limitations of the flow controller being a governor plate, Note that figure 2 shows the controller located in an element separate from the control valve position above the controller.

The device shown by Desai et al. will inherently perform the method steps as recited in the claims during normal operational use of the device since Desai et al. discloses that rate shaping will reduce noise level (see column 1, lines 12+).

Art Unit: 3742

*Response to Arguments*

4. Applicant's arguments with respect to claims 1-72 have been considered but are moot in view of the new ground(s) of rejection.

*Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bram et al. (6,568,602 and US 2003/0127539) and Gebhardt show fuel injectors in the general state of the art of the invention.
